

What do they THINK AND FEEL?

what really counts
major preoccupations
worries & aspirations

I think here we are going to analyze the weather and climatic change and according to it we will give sign to the user

Here we are going to analyze the weather condition and control the speed limits

So far, the road signs have been static. Our project aims to provide digital signs so as to minimize road accidents.

we enable you to activate and manage the speed and weather condition

What do they HEAR?

what friends say
what boss say
what influencers say

I discussed with one of my friends who already completed this project last year and she said he have done the project with the help of his senior who have done the project already.

That our friends say that some of them did this project to analyze the functions of the signals by the help of their mentors.

Some of my friends told that they collected data on their own and implemented that in their project

My professors suggested to go through a lot of research papers to get the key ideas

In todays world more accidents are happening, to control these accidents we should develop smart signal road safety system.

I think this environment will accept the changes which are done by this project and it makes the world to control the road accidents.

We are living in a world that needs technological solutions in all aspects.

I feel it is the right time to switch to digital signs, so as to update ourselves for the better tomorrow.

What do they SEE?

environment
friends
what the market offers

What do they SAY AND DO?

attitude in public
appearance
behavior towards others

Here we have to work as a team so we should split the task accordingly. we can split the task according to the individuals knowledge

Here we are going to do the works as per our knowledge and will accomplish the world from road accidents.

Being an engineer, it is our moral responsibility to serve the society by minimizing the possibility of road accidents.

The main aim is to provide safety by applying several technologies .

PAIN

fears
frustrations
obstacles

Time management is one of the major challenges.

It hard to complete the project within the time.

It is practically quite hard to adapt to the sudden change

It may take some time for us to get along with it. But once we realize its importance, all will definitely provide support.

GAIN

"wants" / needs
measures of success
obstacles

Minimizing the possibility of accidents

Faster communication of events such as diversions or accidents

Better navigation for travellers through new areas

Implementation of technology for better future
